Professional Experience

Software Engineer at Deep Analytics - Jan 2022 - Present(2yrs)

- Collaborated with other engineers in a fast paced and dynamic work environment.
- Maintained and contributed to DA's main Python Computer Vision(CV) codebase.
- Achieved proficiency in the life cycle of training and improving Object Detection algorithms.
- Analyzed dataset makeup to optimize and support CV model training.
- Helped establish and educate coworkers on DA's existing toolset.
- Spearheaded the UI development of a \$2million website.
- Lead development of an Android application for \$1.6million contract.

Projects

Exploratory Analysis of behavior and emotions - Ongoing

- Conducted a self study to investigate how behavior influences emotions
- Collected 6 months of personal data and used a correlation matrix to search for patterns.
- Wrote a 1-pager review of my work and outlined how I intend to build on this existing project.

Computer Vision Dataset Analysis

- Analyzed the COCO(Common Objects In Context) dataset to understand the distribution of object sizes.
- Prepared a presentation of findings for non-technical audience.

UVM Men's Frisbee Website - Ongoing

- Laid out website in wire-frame mock-ups using Figma.
- Developed [the website](#) using Reactjs, Tailwind CSS, & HTML. Hosted on GitHub pages.

Technical Skills & Formal Education

Specialties: Computer Vision, Website Development

Languages: Python(Ultralytics, Pandas, Tensorflow, Numpy, Fiftyone), Javascript(Reactjs), HTML, CSS(Tailwind), Kotlin.

Technologies/Platforms: Git(Gitlab/Github), Docker, Figma, Nuclio(serverless functions), Android Studios

Education: B.A. in CS, University of Vermont, 2017-2021.
